

## Document your output files

- File name: **Export\_1\_bar\_plot.png**
  - The source dataset(s) used to generate the output file. If a subset is used, describe the sample restrictions.
    - Colorado workplace area characters table linked with the Colorado crosswalk table on the census block code
    - I then filtered the column 'C000' (total number of jobs) for values greater than 10 and performed a grouping by county name and summed the total number of jobs by each county.
  - Program(s) that produced the file.
    - R
  - File name containing underlying research sample counts for this file.
    - Export\_1\_counts\_for\_bar\_plot.csv
  - File name(s) that contain supporting statistics required with the dataset.
    - N/A
  - File name(s) containing the code used to create this file.
    - Export\_training.ipynb
  - Any additional comments to help the reviewers understand the file or its context.
- File name: **export\_2\_fuzzy\_median\_jobs.csv**
  - The source dataset(s) used to generate the output file. If a subset is used, describe the sample restrictions.
    - Colorado workplace area characters table linked with the Colorado crosswalk table on the census block code
    - I then filtered the column 'C000' (total number of jobs) for values greater than 10 and performed a grouping by county name and calculated the median number of jobs by census block within each county.
  - Program(s) that produced the file.
    - R
  - File name containing underlying research sample counts for this file.
    - Export\_2\_data.csv
  - File name(s) that contain supporting statistics required with the dataset.
    - N/A
  - File name(s) containing the code used to create this file.
    - Export\_training.ipynb
  - Any additional comments to help the reviewers understand the file or its context.
